

4.19 Mongolia

4.19.1 National Biosafety Framework (2005)

The NBF proposes to establish a National DNA Recombinant Technology Advisory Council and to combine both regulatory and research potential of the country into one unit. It also aims to issue guidelines and technologies to work with new organisms/GMOs and check imported food items for the presence of GMOs. The framework also calls for harmonization of risk assessment strategies at regional and international level and to develop human resources in biotechnology development and its safety issues.
